

GEO FOAMJECTION

CREATES MAN-MADE ROOT SYSTEMS WITH FOAM

What is GEO Foamjection?

Considered an upgrade to standard concrete raising, GEO Foamjection is the process of installing foam deeper to increase the load bearing capacity of the soils.

GEO FOAMJECTION...

- An upgrade to sub-surface concrete lifting
- Repair unstable soils
- Installing a stronger foundation to support slabs and structures that settled
- Foam follows the path of least resistance and will fill weak areas
- Fills fissures and ground voids
- Fills voids holding water & displaces collected water
- Increase load bearing capacity of subgrade
- Permanent repair, foam never changes shape or absorbs ground water
- Foam soaks into the weak soils and then expands, binding the soil and making it solid
- Does not leach chemicals into the ground

NATURE DOES IT BEST - TREES ROOTS HOLD TOGETHER LOOSE SOIL.

As a tree grows, the roots sprawl out in different directions. It is often suggested to prevent erosion that you plant trees that develop root systems. The root systems grow to intertwine with the dirt and hold it together. GEO FOAMJECTION creates man-made root systems with foam.

GEO FOAMJECTION

FINALLY ABLE TO GET TO THE BOTTOM OF THE ISSUE
